NEW Highly Robust Absolute Singleturn Encoder in Compact 36 mm Format, with Magnetic Sensor Technology from Kübler by TURCK

The **Kübler by TURCK** 3650 and 3670 series offer a resolution of 9 bits with available outputs of SSI, 4-20 mA or 0-10 V. There is a suitable measuring range (45°, 90°, 180° or 360°) for every application. The encoders are robust, compact and versatile.

The non-contact magnetic measuring systems are not subject to wear and offer a long service life and high reliability compared to traditional potentiometers. The sturdy die-cast housing and the IP 69K protection rating ensure the encoder remains sealed, even in the harshest environments. Thanks to its wide temperature range of (-40° to +85°C) and an especially high resistance to humidity and condensation, the encoder is ideal for use outdoors - even with large fluctuations in temperature. These features, along with the extremely high resistance to shock (>500 g) and vibration (>30 g), guarantee that the encoders are better able to withstand difficult environmental conditions, thus avoiding machine downtime and the need for repairs.

Sendix® Magnetic Absolute, T8.3670

Sendix Magnetic Absolute, T8.3650

The compact design, as well as a blind hollow shaft of up to 10 mm, means the encoders can be used where space is restricted and can be mounted on a tight radius - even with large shafts. A green LED for reference point detection streamlines start-up, while a red LED simplifies fault diagnostics during maintenance.

The compact design and attractive price/performance ratio of the new 3650 and 3670 absolute encoders open up many new applications that had traditionally utilized potentiometers.
