Zelio® Logic 2 Programmable Smart Relays

Modbus® network slave communication module

SR3 MBU01BD

Combination of smart relays with communication and I/O extension modules

- 1 Modular smart relay (10 or 26 I/O)
- 2 Modbus network slave communication module

- 1 Modular smart relay (10 or 26 I/O)
- 2 Network communication module
- 3 I/O extension module: discrete (6, 10 or 14 I/O) or analog (4 I/O)

⚠ The order shown above must be observed when using a Modbus network slave communication module and a discrete or analog I/O extension module. An I/O extension module cannot be fitted before the Modbus network slave communication module.

Presentation

The Modbus protocol is of the master/slave type.

Two exchange methods are possible:

- request/reply: the request from the master is addressed to a specific slave. The master waits for the reply to be returned by the slave polled,
- distribution: the master distributes a request to all the slave stations on the bus. These stations execute the instruction without sending a reply.

Zelio Logic modular smart relays are connected to the Modbus network via the Modbus network slave communication module. This module is a slave that is not electrically isolated.

The Modbus network slave communication module must be connected to an SR3 B●●●BD modular smart relay, with a 24 V supply only (no other voltages are available).

Configuration

The Modbus network slave communication module can be configured:

- independently, using the buttons on the smart relay,
- on a PC, using "Zelio Soft 2" software, see page 14102/16.

When using a PC, programming can be performed either in LADDER language or in function block diagram (FBD) language, see pages 12 and 13.

Connection example

- 1 Modbus Master programmable controller (for example Twido® PLC).
- 2 Zelio Logic 2 programmable smart relay.
- 3 Modbus network slave communication module.
- 4 T-junction.
- 5 Line end adaptors.

Function description

- The Modbus network slave communication module is connected to a 2-wire or 4-wire Modbus network.
- The maximum length of the network is 1000 m (3281 ft.) 9600 bauds max., AWG 26.
- A maximum of 32 slaves can be connected to the Modbus network, or a maximum of 247 slaves with repeaters.
- Line end adaptors must be fitted to both ends of the line (1 nF/10 V, 120 Ω /0.25 W in series).
- The line must be polarized (470 Ω /0.25 W resistors) (1).
- The connection cable and its RJ45 male connectors must be shielded.
- The "COMMON" signal must be connected directly to the protective ground at one point on the bus.

(1) The polarization resistors must be managed by the master.

Description

The Modbus network slave communication module **SR3 MBU01BD** comprises:

- 1 Two retractable mounting feet.
- 2 A Modbus network connection (RJ45 shielded female connector).
- 3 A communication LED (COM).
- 4 A "Power on" LED (PWR).
- 5 A screw terminal block for the protective ground connection.
- 6 A spring clip for mounting on a 35 mm (1.38") mounting rail.
- 7 Two locating pegs.
- 8 Two locating pegs for clip-on mounting.

Environment characteristics

Product certifications		UL, CSA, GL (pending), C-TICK
Conformity with the low voltage directive	Conforming to 73/23/EEC	EN (IEC) 61131-2 (open equipment)
Conformity with the EMC directive	Conforming to 89/336/EEC	EN (IEC) 61131-2 (Zone B) EN (IEC) 61000-6-2, EN (IEC) 61000-6-3 and EN (IEC) 61000-6-4
Degree of protection	Conforming to IEC/EN 60529	IP 20
Overvoltage category	Conforming to IEC/EN 60664-1	3
Degree of pollution	Conforming to IEC/EN 61131-2	2
Ambient air temperature around the device	Operation	°C (°F) - 20 to + 55 (-4 to +131) + 40 (+104) in an enclosure, conforming to IEC 60068-2-1 and IEC 60068-2-2
	Storage	°C (°F) - 40 to + 70 (-40 to 158)
Maximum relative humidity		95% without condensation or dripping water
Maximum operating altitude	Operation	m (ft.) 2000 (6562)
	Transport	m (ft.) 3048 (10 000)
Mechanical resistance	Immunity to vibration	IEC/EN 60068-2-6, test Fc
	Immunity to mechanical shock	IEC/EN 60068-2-27, test Ea
Resistance to electrostatic discharge	Immunity to electrostatic discharge	IEC/EN 61000-4-2, level 3
Resistance to HF interference (immunity)	Immunity to electromagnetic radiated fields	IEC/EN 61000-4-3, level 3
	Immunity to fast transients in bursts	IEC/EN 61000-4-4, level 3
	Immunity to shock waves	IEC/EN 61000-4-5
	Radio frequency in common mode	IEC/EN 61000-4-6, level 3
	Voltage dips and breaks (∩)	IEC/EN 61000-4-11
	Immunity to damped oscillation waves	IEC/EN 61000-4-12
Conducted and radiated emissions	Conforming to EN 55022/11 (Group 1)	Class B

Parameter entry

Software workshop parameter entry window

Parameters can be entered either using “Zelio Soft 2” software or directly using the buttons on the Zelio Logic 2 programmable smart relay.

When the “RUN” instruction is given, the Zelio Logic 2 programmable smart relay initializes the Modbus network slave communication module in a configuration previously defined in the basic program.

The Modbus network slave communication module has 4 parameters:

- number of UART wires and format of the frames on the Modbus network,
- transmission speed,
- parity,
- network address of the Modbus module.

The default parameter settings are as follows: 2-wire, RTU, 19 200 bauds, even parity, address #1.

Parameter entry	Options
Number of wires	2 or 4
Frame format	RTU or ASCII
Transmission speed in bauds	1200, 2400, 4800, 9600, 19 200, 28 800, 38 400, 57 600
Parity	None, even, odd
Network address	1 to 247

Addressing of Modbus exchanges

LADDER programming (1)

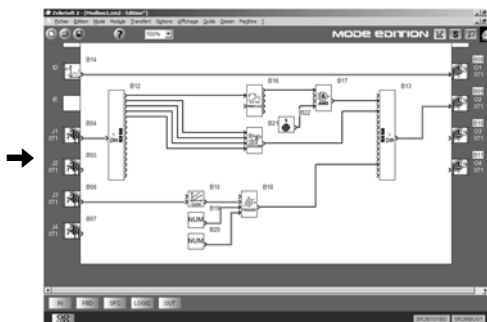

In LADDER mode, the 4 data words (16 bits) to be exchanged cannot be accessed by the application. Transfers with the master are implicit and are effected in a way that is totally transparent.

Modbus exchanges	Code	Number of words
Image of smart relay I/O	Read 03	4
	Read/Write 16, 06 or 03	4
		
Status	Read 03	1
		

Function block diagram (FBD) programming (2)

In FBD mode, the 4 input data words (16 bits) (J1XT1 to J4XT1) and the 4 output data words (O1XT1 to O4XT1) can be accessed by the application. Dedicated function blocks make it possible to:

- break down a ‘complete’ type input (16 bits) into 16 separate “bit” type outputs.
 - example: break down a Modbus type input (J1XT1 to J4XT1) and copy these status values to discrete outputs.
- make up a ‘complete’ type output (16 bits) from 16 separate “bit” type outputs.
 - example: transfer the status value of the discrete inputs or the status of a function to a Modbus type output (O1XT1 to O4XT1).

Modbus exchanges	Code	Number of words
	Read/Write 16, 06 or 03	4
	Read 03	4
	Read/Write 16, 06 or 03	4
		
Status	Read 03	1
		

(1) See page 12.
(2) See page 13.

Modem communication interface

523083

SR2 COM01

Presentation

The communication products in the Zelio Logic 2 range are primarily designed for monitoring or remote control of machines or installations which operate without personnel.

Examples:

- monitoring of lift pumps, livestock premises (ventilation, food level, etc.), refrigeration units, car-washes,
- alert in the event of failure of industrial or domestic heating boilers,
- remote control of lighting: car parks, warehouses,
- remote control and monitoring of escalators in large stores, in the transport sector,
- refuse compact or full alert.

The communication range comprises:

- a communication interface connected between a smart relay and a Modem,
- GSM (1) or analog (PSTN) (2) Modems,
- "Zelio Logic Alarm" software.

The system comprises:

- a *Remote station*, machine or installation to be monitored **1**: control is achieved using a smart relay with clock from the "Zelio Logic" SR● B●●●●● or SR2 E●●●●● **2** range, via its inputs and outputs. The smart relay is connected via a communication interface **3** to a GSM (1) type Modem **4**, or, when a telephone line is available nearby, to an analog PSTN modem (2),
- the GSM **5** or analog **6** TRANSMISSION NETWORK provided by different telecommunication operators,
- a monitoring or control *Receiving device*, which may be one of the following:
 - a PC **7** fitted with an analog PSTN or GSM Modem **8**,
 - a GSM telephone **9**.

Note: the majority of Modems built into PCs can be used.

Various combinations are possible between the types of Modem used on the *Remote station* and the type of *Receiving device* (PC + Modems or GSM telephone).

The type of architecture selected will therefore depend mainly on:

- whether or not an analog PSTN telephone line is available,
- whether or not it is necessary to send SMS messages, see page 35.

(2) Public Switched Telephone Network.

Zelio[®] Logic 2

Programmable Smart Relays

Modem communication interface

Presentation (continued)

Smart relay (*Remote station*)

The smart relay, as on an independent machine or installation, is used for control (1). It contains the application program created using "Zelio Soft 2" software.

The smart relay may be selected from the various models in the Zelio Logic 2 range:

- for all supply voltages,
- with 10, 12, 20 or 26 I/O (up to 40 I/O with discrete extension module),
- with or without display,
- with clock.

The firmware version of the smart relay must be V3.1. or above.

Modem communication interface (*Remote station*)

The Modem communication interface allows messages, telephone numbers and calling conditions to be stored.

When the calling conditions are met, the messages, as well as any values to be sent, are date-stamped and stored in the interface.

The Modem communication interface scales analog values to the physical values (degree, bar, Pascal, etc.) required by the user.

Modems

Either GSM or analog PSTN type Modems can be used on both the *Remote station* and PC type *Receiving devices* (when the PC is not fitted with an internal Modem).

GSM modem

In order to exploit all the capabilities associated with Modem communication, the Modem(s) must be fitted with DATA type SIM cards. VOICE type SIM cards may be used but some functions will not be available. See table on page 35.

"Zelio Logic Alarm" alarm management software (PC type *Receiving device*)

This software makes it possible to:

- receive, classify and export alarm messages,
- read or remotely force the status of program elements (inputs, outputs, control relays, timing or counting values, etc.),
- send control instructions (RUN, STOP, setting the time of the smart relay, etc.),
- send specific instructions (modifying access rights, recipients, etc.).

(1) *Zelio Logic smart relays, see pages 8 to 28.*

Description

The communication interface Zelio Logic SR2 COM01 comprises:

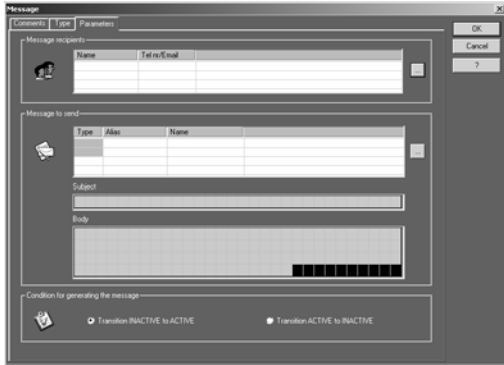

- 1 Retractable mounting feet.
- 2 A $\bar{\text{—}}$ 12 to 24 V supply terminal block.
- 3 A slot for connection to the Modem or the PC
- 4 An interface status LED indicator.
- 5 A connection cable to the smart relay.
- 6 A spring clip for mounting on a 35 mm mounting rail.

Zelio® Logic 2

Programmable Smart Relays

Modem communication interface

Functions

Sending of alerts

This function makes it possible to send an alert to a *Receiving device*. When the calling condition is met, a message is sent to one or several telephone numbers or e-mail addresses.

Types of message:

- alert message to a PC with Modem and “Zelio Logic Alarm” software,
- SMS message (1) to a GSM telephone,
- e-mail via SMS (1) (2).

One or all of the solutions can be selected simultaneously.

The *Remote station* to be monitored initiates the call.

The telephone line is only used while the alert message is being transmitted.

Up to 28 messages can be used.

These messages consist of:

- a 160 character text, which may contain a discrete and/or analog value (counting values, analog input voltages that can be scaled, etc.).
- 1 to 10 recipient telephone numbers/e-mail addresses.

Receipt of instruction

This function allows the status or the value of a program element to be modified from the *Receiving device*.

The operator initiates the call using the *Receiving device* (PC or GSM telephone). It is then possible to force the status of the discrete and/or analog value of each of the 28 messages.

Remote dialogue using “Zelio Soft 2”

This function enables use of the Transfer, Monitoring and Diagnostics modes available in “Zelio Soft 2”, via the *Transmission network* instead of the physical link (cable SR2 USB01 or SR2 CBL01) between the product (*Remote station*) and the PC (*Receiving device*).

It is then possible to:

- transfer a program created on a PC station to the *Remote station*,
- transfer a program installed on the *Remote station* to the PC station,
- modify, from the PC, the receiving device telephone numbers/e-mail addresses, and the alert sending conditions,
- update the firmware in the smart relay and the Modem communication interface,
- display and modify discrete and analog values,
- perform diagnostics on the smart relay and on the Modem communication interface.

(1) Requires the use of a GSM Modem on the *Remote station* side.

(2) Verify with the *Transmission network* operator that the e-mail by SMS service is available.

Zelio® Logic 2

Programmable Smart Relays

Modem communication interface

Functions available depending on the hardware architecture and/or type of SIM card

Function	Remote station device				
	Analog PSTN Modem	GSM Modem			
		Type of SIM card			
		DATA	DATA VOICE	VOICE	
		DATA N°	VOICE N°		
Send alert/receive instruction with GSM telephone					
Send alert/receive instruction with PC running "Zelio Logic Alarm" software (1)					
Transfer program Update firmware Monitoring					
Send alert to e-mail address					

 Functions available
 Functions not available

Note: Instructions cannot be transmitted by e-mail.

(1) When using a GSM Modem on the PC side, the SIM card must have a DATA number.

Zelio® Logic 2 Programmable Smart Relays

Modem communication interface

Installation set-up

Setting-up of the installation or the machine to be monitored involves 2 steps:

Connection for programming the smart relay and the interface

- 1 Interface cable marked COM-Z
- 2 Cable SR2 USB01 or SR2 CBL01.

After having powered-up the smart relay and the interface, the application program can be transferred in order to simultaneously:

- load the automation system program into the smart relay,
- load the alert conditions, messages and telephone numbers/e-mail addresses into the interface.

This operation can also be carried out remotely using "Transfer" mode, after having made the operating connections described below.

△ Program loading using memory cartridges SR2 MEM01 or SR2 MEM02 is incompatible with Modem communication interface SR2 COM01.

Operating connections

Analog PSTN modem

- 1 Interface cable marked COM-Z.
- 2 Cable SR2 CBL07 included with the interface.

GSM Modem

- 1 Interface cable marked COM-Z.
- 2 Cable SR2 CBL07 included with the interface.
- 3 SUB-D 9/SUB-D 15 cable included with the Modem
- 4 Antenna and cable included with the Modem.

Power supplies

Power supplies for d.c. control circuits Phaseo® modular regulated power supplies

Modular switch mode power supplies ABL 7RM

The ABL 7RM range of power supplies is designed to provide the d.c. voltage necessary for the control circuits of automation system equipment. Comprising 3 products, this range meets the needs encountered in industrial, commercial and residential applications. These single-phase, modular, electronic switch mode power supplies provide a quality of output current which is suitable for the loads supplied and compatible with the Zelio Logic 2 programmable smart relays range, making them ideal partners. Clear guidelines are given on selecting the upstream protection devices which are often used with them, and thus a comprehensive solution is provided that can be used in total safety.

These switch mode power supplies are totally electronic and regulated. The use of electronics makes it possible to significantly improve the performance of these power supplies, which offer:

- very compact size,
- integrated overload, short-circuit, overvoltage and undervoltage protection,
- a very wide range of permissible input voltages, without any adjustment,
- a high degree of output voltage stability,
- good performance,
- considerably reduced weight,
- a modular format allowing integration into panels.

Phaseo power supplies deliver a voltage which is precise to 3%, whatever the load and whatever the type of mains supply, within a range of 85 to 264 V for single-phase. Conforming to IEC standards and UL and CSA certified, they are suitable for universal use. The inclusion of overload and short-circuit protection makes downstream protection unnecessary if discrimination is not required.

All the products are fitted with an output voltage adjustment potentiometer in order to be able to compensate for any line voltage drops in installations with long cable runs. These power supplies are designed for direct mounting on 35 mm (1.38") and 75 mm (2.95") rails, or on a mounting plate using the retractable mounting feet.

These power supplies are single-phase and three references are available:

- ABL 7RM2401 (24 V \Rightarrow 1.3 A),
- ABL 7RM24025 (24 V \Rightarrow 2.5 A),
- ABL 7RM1202 (12 V \Rightarrow 1.9 A).

Connections	Input	mm ² (AWG)	1 x 2.5 (#14 AWG) or 2 x 1.5 (#16 AWG) screw terminals	
	Output	mm ² (AWG)	1 x 2.5 (#14 AWG) or 2 x 1.5 (#16 AWG) screw terminals	
Environment	Storage temperature	°C (°F)	- 25 to + 70 (-13 to + 158)	- 40 to + 70 (-40 to +158)
	Operating temperature	°C (°F)	- 20 to + 55 (-4 to + 131)	
	Maximum relative humidity		95 %	
	Degree of protection		IP 20	
	Vibration		IEC/EN 61131-2, IEC/EN 60068-2-6 test Fc	
Operating position			Vertical	
Connections	Series		No	
	Parallel		Yes (same references)	
Dielectric strength	Input/output		3000 Vac/50 Hz/1 min	
Protection class conforming to VDE 0106 1			Class II without PE	
Input fuse incorporated			Yes (not interchangeable)	
Emissions	Conducted/radiated		IEC/EN 61000-6-3, EN 55011, EN 55022 Cl:B	
Immunity	Electrostatic discharge		IEC/EN 61000-6-2 (generic standard), IEC/EN 61000-4-2 (4 kV contact/8 kV air)	
	Electromagnetic		IEC/EN 61000-4-3 level 3 (10 V/m)	
	Conducted interference		IEC/EN 61000-4-4 level 3 (2 kV), IEC/EN 61000-4-6 (10 V)	
	Mains interference		IEC/EN 61000-4-11	

Output characteristics

Exceeding the nominal power (only applicable to ABL 7RM1202 and ABL 7RM2401)

The ambient temperature is a determining factor which limits the power that an electronic power supply can deliver continuously. If the temperature around the electronic components is too high, their life will be significantly reduced. Conversely, a power supply can deliver more than its nominal power if the ambient temperature remains well below the nominal operating temperature.

The maximum ambient temperature for Phaseo power supplies is 55 °C (131 °F). Below this temperature, uprating is possible up to 110% of the nominal power. The graph below shows the power (in relation to the nominal power) that the power supply can deliver continuously, according to the ambient temperature. Power supply ABL 7RM24025 cannot exceed the nominal power of 60 W.

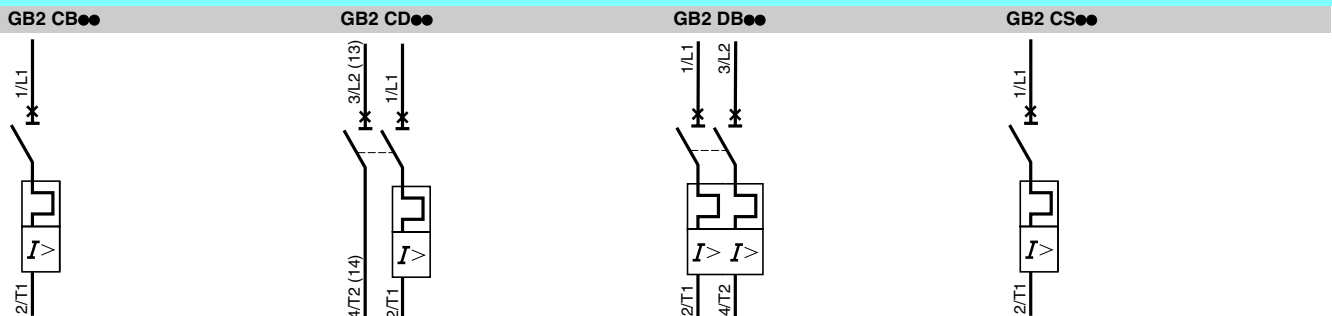

- 1 ABL 7RM24025
- 2 ABL 7RM1202 and ABL 7RM2401

Selection

The efficiency of Telemecanique® branded *solutions*

Used in combination, Telemecanique products provide quality solutions, meeting all your **Automation & Control** applications requirements.

A worldwide presence

Constantly available

- More than 5 000 points of sale in 130 countries.
- You can be sure to find the range of products that are right for you and which complies fully with the standards in the country where they are used.

Technical assistance wherever you are

- Our technicians are at your disposal to assist you in finding the optimum solution for your particular needs.
- Schneider Electric provides you with all necessary technical assistance, throughout the world.

Find out more about Zelio Logic
for your applications with the “discovery” packs:

- pack contains:
1 product, 1 connecting cable and 1 software CD
- available in 24 Vdc or 100...240Vac
